This week's achievements

- We passed the test!
- We made an excel sheet with all of our work in it

Our planning for next week

- Implementing polynomial regression (with manipulated variables)
- Finish plotting theta

Continue researching techniques that can prevent overfitting of neural networks:

- We are researching convolutional neural networks
- Try working with dropouts
- Research possibilities for making dummies
- Studying for the test!

Problems we faced

- Visualize the exercise (weird angles in our visualisation)
 - Distinct the excercises, because we can't yet

Any questions or suggestions?
